

The ARM7TDMI-s has total ____ many number of core-registers.

- ☐ 15
- ☐ 16
- ☐ 35
- ☒ 37

Port1 has _____ pins available for GPIO functions.

- ☐ 8pins
- ☐ 16pins
- ☒ 32pins
- ☐ None of above

The node/ecu is said to be in the Bus-off state if TEC value is _____.

During data-frame transmission, transmitter node will expect _____ during ACK-SLOT field.

The start condition followed by the _____ sequence of bits leads to 10 bit addressing mode in I2C.

Assume that three masters (M1,M2&M3) are communicating with three slaves (S1,S2&S3) respectively. The slave addresses are 0x80(S1), 0x50(S2) & 0xA0(S3) respectively. Then which master becomes the winner in arbitration?

-
- ☐ Master1
 - ☐ Master2
 - ☐ Master3

Assume that three masters (M1,M2&M3) are communicating with three slaves (S1,S2&S3) respectively. The slave addresses are 0x80(S1), 0x50(S2) & 0xA0(S3) respectively. Then which master becomes the winner in arbitration?

- ☒ Master1
- ☐ Master2
- ☐ Master3

The _____ architecture of the ARM7 family supports THUMB instructions.

The sizeof CGRAM is _____ in the Alphanumeric LCD.

- ☐ 40bits
- ☐ 32bytes
- ☒ 64bytes
- ☐ 9920bits

The following arithmetic flag is not available in ARM7 CPSR register.

- ☐ Carry (CY)
- ☐ Overflow (OV)
- ☐ Zero (Z)
- ☒ Auxiliary Carry Flag (AC)

The standard data frame format in UART is _____ frame.

How to select raising-edge sensitivity ?

_____ specifies the data link layer (DLL) of CAN protocol.

The program memory is also called _____ memory.

- ☐ code
- ☐ data
- ☐ code and data
- ☐ none of the above

In Active Low LED connection _____ terminal of LED must be connected to the microcontroller's GPIO pin.

- ☐ Anode
- ☐ Cathode

Why is the differential voltage method is used in the CAN hardware setup? (2M)

Maximum speed of UART upto _____

In the LPC2129 programming, the Interrupt Vector Table is defined in _____ memory.

- ☐ RAM
- ☐ Flash
- ☐ both a&b
- ☐ none of these

Write down a minimum of 4 differences between CAN & I2C protocols. (4M)

The topology supported by CAN (ISO 11898) protocol is ____.

The topology supported by CAN (ISO 11898) protocol is ____.

In the I2C protocol, what is the status code for checking "start condition has been transmitted".

The size of CRC field is _____ bits in standard data-frame of CAN.

In the I2C controller, if the I2EN & ACK bit of I2CONSET is set to high, then it represents ____.

Write down minimum 4 differences between I2C & SPI protocol.

(2M)

The SPI protocol is _____ & _____ communication protocol.

What is the size of Flash ROM & RAM in the LPC2129 Microcontroller?

- ☐ 512KB & 32KB
- ☐ 32KB & 512KB
- ☐ 16KB & 256KB
- ☒ 256KB & 16KB

In the CAN1 driver, which of this register will decide the next transmit message will be sent with an 11-bit Identifier/29-bit Identifier.

The node/ecu is said to be in the Active-Error state if TEC value is ____.

If the address bus is 20 bit then the maximum memory interfaced is _____.

- ☐ 256 bytes
- ☐ 4GB
- ☐ 1MB
- ☐ 1KB

Which bit of SPI0 Control Reg (S0SPCR) used to set MSB/LSB first direction of data-transfer?

How to select raising-edge sensitivity ?

In Vectored IRQ's _____ ISR and _____ address for every interrupt.

The maximum data that can be transmitted in extended data-frame of CAN is ____.

In the LPC2129 programming, the Interrupt Vector Table is defined in _____ memory.

- ☐ RAM
- ☒ Flash
- ☐ both a&b
- ☐ none of these

The ARM7 is following _____ mapped I/O system.

- ☐ Memory mapped
- ☒ I/O mapped
- ☐ Both 1 & 2
- ☐ None of the above

How to select raising-edge sensitivity ?

The start condition followed by the _____ sequence of bits leads to 10 bit addressing mode in I2C.

In Vectored IRQ's _____ ISR and _____ address for every interrupt.
